

1.6) Create a Javascript program to to perform artihmetic operations

The screenshot displays the Visual Studio Code editor with a JavaScript file named `pgm1.6.js` open. The code defines two variables, `a` and `b`, and uses `console.log` to output the results of various arithmetic operations. The terminal at the bottom shows the command `node pgm1.6.js` being executed, resulting in the following output:

```
E:\MCA\2 semester\WT\Assignment>node pgm1.6.js
10+5=15
10-5=5
10*5=50
10/5=2
10%5=0
E:\MCA\2 semester\WT\Assignment>
```

An update notification for Visual Studio Code 1.56.2 is visible in the bottom right corner of the editor window.
